

1 **DEFINING VARIABLES USED IN A MULTI-LINGUAL INTERNET**
2 **PRESENTATION**

3 **ABSTRACT**

4 The present invention provides methods, apparatus and
5 systems for defining variables to be used in a
6 multi-lingual presentation system accessed by the Internet
7 network wherein a plurality of visual objects such as
8 charts and/or slides controlled by a third party in a
9 server can be accessed by any user of the Internet network
10 having a workstation. In an example embodiment, visual
11 objects are each associated with an audio recording in any
12 language selected amongst several predetermined languages.
13 This method generally includes creating a control file
14 having variables defining all the parameters of a
15 presentation requested by a user of the Internet network.
16 The variables are defined in the control file previously to
17 the presentation.
